

HIPAA, Healthcare & Cybersecurity: New Threats to Health Information & New Guidance

Webinar #T5028

DATE AND TIME

March 15, 2018
12:30 - 2:00 p.m. CT

OVERVIEW

If you are not prepared to deal with Cybersecurity issues your organization can be brought to its knees. More than one healthcare entity has had to scrap its entire IT infrastructure to recover from an attack, at a cost of millions of dollars, and entities that are not sufficiently prepared to deal with Cybersecurity issues may receive penalties from the US Department of Health and Human Services if a breach results. Now is the time to be sure your Cybersecurity stance is strong and resilient and follows recommendations by HHS and NIST.

In this session, we will examine how following the requirements of the HIPAA Security Rule and specifically taking into consideration cyber-threats can help a healthcare entity prepare itself to defend against cyber-attacks and the significant impacts to privacy, security, and patient care and safety that can result. We will learn about the latest guidance and tools for assisting in preparation and response to cyber-attacks, and what to do if the attack is successful and creates an incident that must be managed and recovered from.

TARGET AUDIENCE

Compliance officers, privacy and security officers, health information management leadership and staff, information security, and patient relations, as well as staff in patient intake and front-line patient relations. Also, others interested in or responsible for patient communications, information management, and privacy and security of protected health information (PHI) under the Health Insurance Portability and Accountability (HIPAA) Act should attend.

OBJECTIVES

1. Discuss how the HIPAA Security Rule addresses Cybersecurity, and how to use the rule to prevent cyberattacks.
2. Explain how Cybersecurity is different from other kinds of security issues and why it deserves special attention.
3. Describe the NIST Cybersecurity Framework and how to use it to prepare for and respond to Cybersecurity events.
4. Evaluate the importance of regular, repeated training to help prevent the initiation of an attack on your systems.
5. Discuss how to respond to and follow up on an attack that may result in a breach of information.

FACULTY

Jim Sheldon-Dean, Founder/Director of Compliance Services
Lewis Creek Systems, LLC

Jim Sheldon-Dean is a frequent speaker regarding HIPAA, including speaking engagements at numerous national healthcare association conferences and conventions, and the annual NIST/OCR HIPAA Security Conference. Mr. Sheldon-Dean has more than 16 years of experience specializing in HIPAA compliance, more than 34 years of experience in policy analysis and implementation, business process analysis, information systems and software development, and eight years of experience as a Vermont certified volunteer emergency medical technician. He has no real or perceived conflicts of interest that relate to this presentation.

PRICE

\$195 per connection for members.
\$390 per connection for non-members.

Note: The fee is for one phone line with unlimited participants. For example, 10 employees can participate for only \$19.50 ea!
